ASCE | KNOWLEDGE
& LEARNING

ASCE | KNOWLEDGE
& LEARNING

Why Access Management is Important

2

ASCE | KNOWLEDGE
& LEARNING

What is Access Management

- Managing each point of access to a road.
- Driveways and intersections
- Interchanges and interchange crossroads
- Goals: Smoother traffic flow
- Better travel times
- Less stressful drive
- Fewer accidents

3

Why managing access is a key element in investing in construction and design

- Improves capacity in addition to adding lanes
- Helps preserve capacity as originally intended
- Reduces crash rate and frequency significantly over the life of the investment
- Extends functional life of the project - supports sustainability

4

ASCE | KNOWLEDGE & LEARNING

SAFETY is a big component of Access Management

5

ASCE | KNOWLEDGE & LEARNING

Roadways are the Most Dangerous Public Facilities on the Face of the Earth

- In the US, about 650 people are killed each **week**
- Over 15,000 Crashes each **day**
- Over 6,000 Injuries each **day**

•The leading cause of death of a child, age 3 to 14 is a traffic crash.

6

At the current U.S. crash rate, one person of every 90 born today will die violently in a motor vehicle crash. 70 out of every 100 will be injured at some point in their lives.

AASHTO Strategic Highway
Safety Plan, December 2004

7

ASCE | KNOWLEDGE
& LEARNING

Relationship Between Access and Crashes

8

ASCE | KNOWLEDGE
& LEARNING

- Access Related crashes at driveways and intersections represent over 55 percent of all traffic crashes. 65% to 75% in urban areas
- More than 3 million access related crashes annually.
- Over 3,000 access related injuries each day.

9

ASCE KNOWLEDGE & LEARNING

There is no such thing as a Safe Access.

As the number of access points per mile increase, so does the frequency of total highway collisions.

The crash rate also increases.
Each access = 4%

Source: Estimated from Various Sources

Figure 15. Composite accident rate indices.

NCHRP 420

Every Access Point is Fundamentally a Safety Problem

- Issuing an access permit is a decision to diminish public safety and roadway function.

11

Photo by Dr. J.L. Gattis

ASCE | KNOWLEDGE & LEARNING

When access principles are applied to a specific Corridor

- Crashes reduced by 30 to 60 percent
- Capacity increased by 20 to 40 percent

12

ASCE | KNOWLEDGE & LEARNING

In its simplest form, Access Management is Conflict Management

- If you reduce the rate and severity of conflicts the motorist encounters, you will reduce the crash rate, the injury rate and increase the smooth flow of traffic.

From Florida DOT

ICE KNOWLEDGE & LEARNING

13

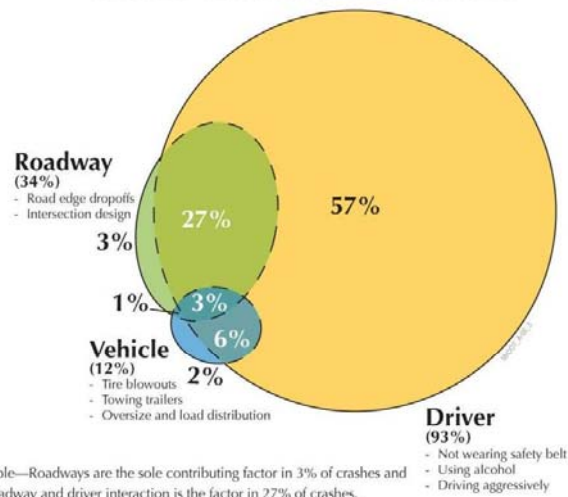

Managing road design

- Do we design for the vehicle?
 - Design vehicle, basic stopping distance criteria, sight distance
- Or increase design for the driver?
 - Varying reaction times
 - Exceeding design speed
 - Inattentiveness, aggressiveness
 - Increase the allowances for P.I.E.V.
 - (Perception, Intellection, Emotion, Volition)

15

ASCE | KNOWLEDGE & LEARNING

Crash Causation Factors

16

Adopted from Elizabeth Alicandri and the Minnesota DOT

ASCE | KNOWLEDGE & LEARNING

Design Allowance for Human Errors

- If no human errors, there should only be about 7% of the current crash history
- Should we increase our design considerations for human error?
- Conflict management addresses driver error and has capacity and safety benefits.

17

ASCE | KNOWLEDGE & LEARNING

Driver Work-Load is a Rate

- Speed = increases work load rate
- Conflict frequency = increases work load rate
- High work load = higher crash rate

AM Strategy: Driver Work-Load can be modified by good planning and design

18

ASCE | KNOWLEDGE & LEARNING

Design and location principles in access management

19

ASCE | KNOWLEDGE & LEARNING

Goals of Access Management

- Separate Turning Vehicles from through traffic
 - Provide left and right turn lanes

20

ASCE | KNOWLEDGE & LEARNING

Goals of Access Management

- Separate conflict points
- Fewer per mile

21

ASCE | KNOWLEDGE & LEARNING

Goals of Access Management

- Keep private access off arterials

22

ASCE | KNOWLEDGE & LEARNING

Goals of Access Management

- Keep private access off arterials

23

ASCE | KNOWLEDGE & LEARNING

Modern Access Management does not recommend frontage road systems

24

ASCE | KNOWLEDGE & LEARNING

Internal Circulation w/ Limited Access

25

ASCE | KNOWLEDGE & LEARNING

Hierarchical Network is an Access Management Strategy

26

ASCE | KNOWLEDGE & LEARNING

Remove Driveways from Arterial Roadway Speed Reduces Driveway Safety

27

ASCE | KNOWLEDGE & LEARNING

Backage Roads, Local Internal Streets

28

ASCE | KNOWLEDGE & LEARNING

Land use planning and project design decisions do establish long term crash rates

- Planning and Engineering decisions determine – Access need, location, frequency, type and traffic volume - thereby establishing roadway conflict rates.

29

ASCE | KNOWLEDGE & LEARNING

As arterials are widened, volumes and speeds increase and most frequently crash rates and severity also increase.

30

ASCE | KNOWLEDGE & LEARNING

Land use, site plan approvals, can produce high conflict rates

31

ASCE | KNOWLEDGE & LEARNING

If a roadway program or project can reduce the crash rate from 12.5 to 3.5 per MVM

| For a Typical 3 Mile Section of 4 Lanes at 37,000 daily traffic | Top Highway | Bottom Highway |
|---|-------------|----------------|
| Number of Conflict points | 1,641 | 324 |
| Number of Crashes Expected in 5 years | 2,435 | 680 |
| Cost of Crashes in 5 years | \$ 26.5 M | \$ 7.5 M |
| Average Speed | 25 MPH | 44 MPH |

3.5 vs 12.5 mvm

ASCE | KNOWLEDGE & LEARNING

Implementation of access management at the planning level

Access Decisions begins with long range planning

- Long range planning
 - Policies, staff budgets, Regional plans
- Modal Planning, Corridor Planning
 - Functional levels, network density, width
- Operational Planning
 - Building, traffic, site design codes, standards
- Project Planning
 - Access Plans, Site Plan approvals, subdivisions

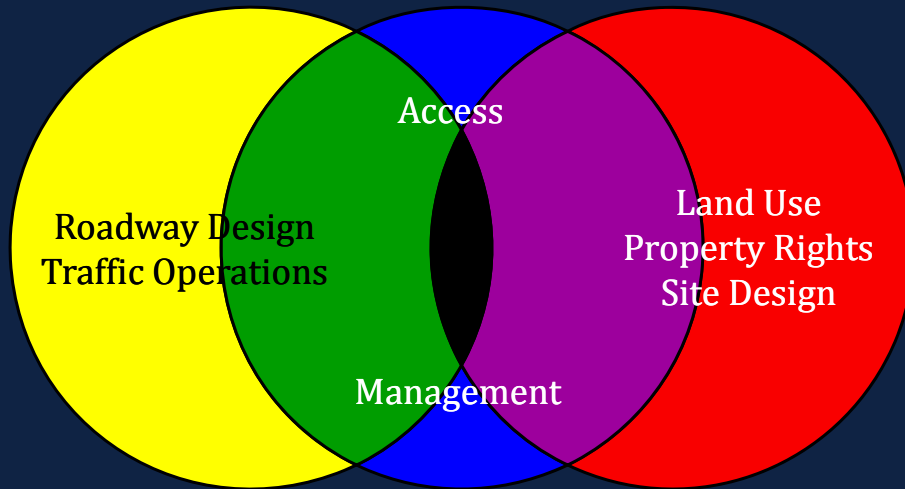

A Guidebook for Including Access Management

In Transportation Planning. NCHRP 548: Transportation Research Board. **ASCE** KNOWLEDGE & LEARNING

Why is Access Management Difficult to Execute

- Legal considerations – Property rights
- Crosses professional and agency organizational lines
- Reluctance of highway agencies to deal with land side issues
- Failure of elected officials to put into practice what is necessary for safety

Building a bridge between different agencies and different professions

Source: Adopted from Chris Huffman,

ASCE | KNOWLEDGE & LEARNING

Decision Logic, Process, Framework, for Access Permitting

38

ASCE | KNOWLEDGE & LEARNING

System Wide Access Classification System

- Sets the system hierarchy
- Based on functional level designations
- The access classification determines the answer to the question:
 - May I have access to the roadway?
 - It's the heart of any access program.

39

Decision Flow Chart For Permit Decision:
1. Qualify?
2. Location
3. Mitigate

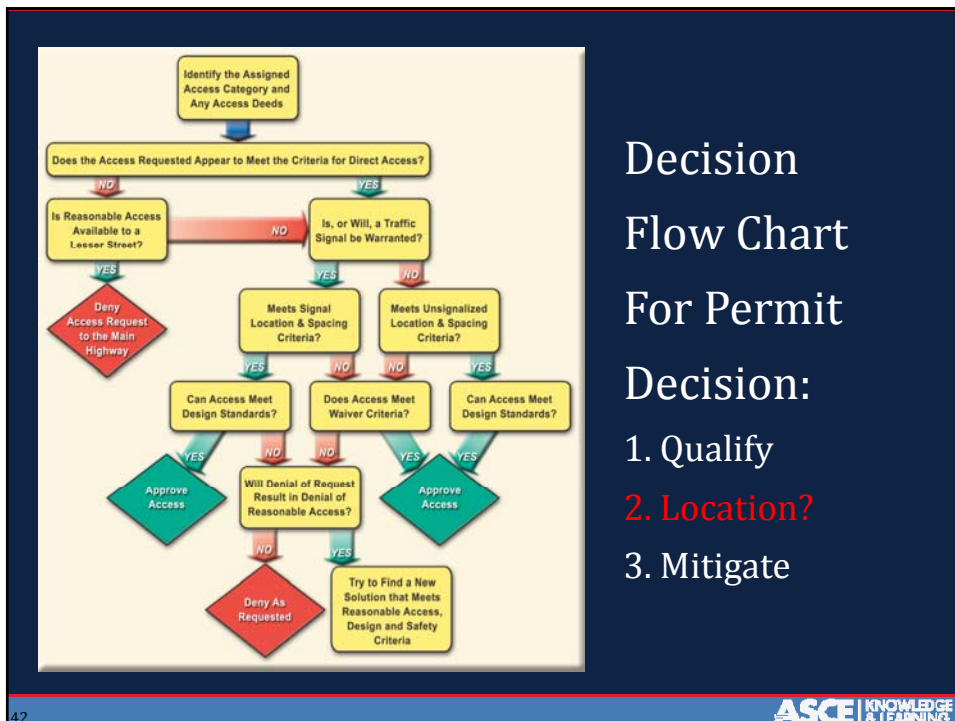

40

Access Categories to Manage by Function

| Access Management Categories | |
|---------------------------------|----------------------|
| FW (freeway) | |
| MR (major regional) | |
| R1 (rural principal) | U1 (urban principal) |
| R2 (rural secondary) | U2 (urban mixed) |
| | U3 (urban secondary) |
| SF (service and frontage roads) | |

41

ASCE | KNOWLEDGE & LEARNING

Decision Flow Chart For Permit Decision:

1. Qualify
2. Location?
3. Mitigate

42

ASCE | KNOWLEDGE & LEARNING

Location Determination Example

- First – Decision Sight Distance (AASHTO)

| | | | | | | | | | | |
|---------------------|-----|-----|-----|-----|-----|------|------|------|------|------|
| Posted speed in MPH | 25 | 30 | 35 | 40 | 45 | 50 | 55 | 60 | 65 | 70 |
| Distance in feet | 625 | 715 | 800 | 890 | 980 | 1125 | 1220 | 1275 | 1365 | 1455 |

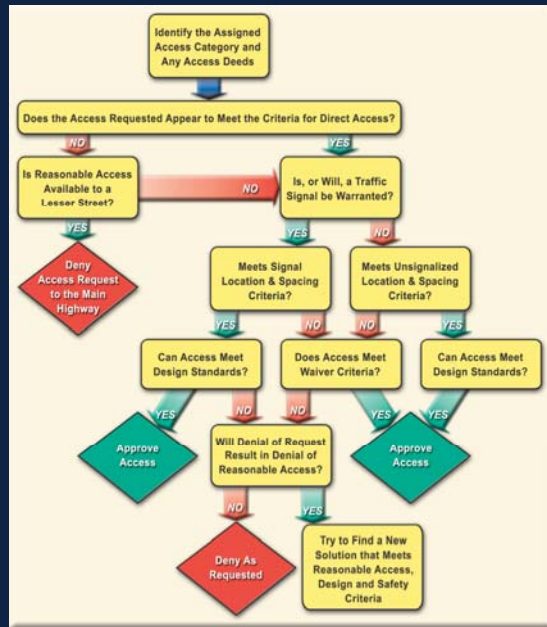

- Second – Spacing from other accesses

| | | | | | | | | | | |
|---------------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|
| Posted speed in MPH | 25 | 30 | 35 | 40 | 45 | 50 | 55 | 60 | 65 | 70 |
| Approach Spacing | 200 | 250 | 360 | 425 | 495 | 570 | 645 | 730 | 820 | 910 |

- Bottom line – stopping sight distance (adj for design speed)

| | | | | | | | | | | |
|-------------------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----|
| Posted speed in MPH | 25 | 30 | 35 | 40 | 45 | 50 | 55 | 60 | 65 | 70 |
| Sight distance (in ft.) | 160 | 210 | 265 | 320 | 385 | 455 | 530 | 610 | 695 | 785 |

43

Decision Flow Chart For Permit Decision:
 1. Qualify
 2. Location
 3. Mitigate

44

Sample Turn Lane Warrants

| Access Category | Left-turn Decel | | Right-turn Decel Lane | |
|-----------------|-----------------|--------------|-----------------------|--------------|
| | At/Above 45 MPH | Below 45 MPH | At/Above 45 MPH | Below 45 MPH |
| MR | 10 AADT | 10 AADT | 5 VPH | 10 VPH |
| U1 | 10 VPH | 10 VPH | 10 VPH | 10 VPH |
| U2 | 10 VPH | 15 VPH | 15 VPH | 15 VPH |
| U3 | 10 VPH | 25 VPH | 15 VPH | 25 VPH |
| R1 | 10 VPH | 10 VPH | 10 VPH | 10 VPH |
| R2 | 10 VPH | 15 VPH | 10 VPH | 15 VPH |
| SF | 10 VPH | 25 VPH | 15 VPH | 25 VPH |

45

ASCE | KNOWLEDGE & LEARNING

Deceleration Lane Length Options

| | | | | |
|--------------------------|-----|-----|-----|-----|
| Speed in MPH | 35 | 45 | 55 | 65 |
| Deceleration Length, Ft. | 215 | 345 | 510 | 710 |

10 mph speed differential for normal arterial

| | | | | |
|--------------------------|-----|-----|-----|------|
| Speed in MPH | 35 | 45 | 55 | 65 |
| Deceleration Length, Ft. | 350 | 630 | 810 | 1060 |

Zero mph speed differential For major arterial, expressway

46

ASCE | KNOWLEDGE & LEARNING

Matching Deceleration turn-lane length to functional level of the roadway

| Posted Speed Limit | 25 | 30 | 35 | 40 | 45 | 50 | 55 | 60 | 65 | 70 | 75 |
|-------------------------|-----|-----|-----|-----|-----|-----|-----|-----|------|------|------|
| MR | 210 | 280 | 350 | 490 | 630 | 700 | 810 | 930 | 1060 | 1100 | 1350 |
| R1 or U1, | 110 | 160 | 215 | 275 | 345 | 425 | 510 | 605 | 710 | 820 | 950 |
| R2, U2, U3, & SF | 105 | 145 | 190 | 245 | 300 | 365 | 435 | 510 | 590 | 680 | 800 |
| Transition Taper length | 50 | 50 | 50 | 50 | 75 | 75 | 75 | 75 | 75 | 100 | 100 |

- Values above are taper and decel length combined
- Storage length is added to above values

47

ASCE | KNOWLEDGE & LEARNING

Minimum Design

- Minimum design means
 - minimum capacity
 - minimum safety
 - minimum costs.
- Permits should act to minimize the impacts of the new access
- Functional operation and project life fails sooner with minimum designs.

48

ASCE | KNOWLEDGE & LEARNING

Minimum Turn lane lengths Impact Peak Hour Mobility, Capacity

49

ASCE | KNOWLEDGE & LEARNING

Fitting Access Management into Urban and Context Sensitive Locations

- Create access criteria for CS location
- Have realistic standards for sensitive areas linked to a performance level
- Assign the CS category where needed
- A rational regional transportation plan

50

ASCE | KNOWLEDGE & LEARNING

Legal Issues in Access Management

- Property rights do not include the right to create safety problems on public facilities

- There is no right to a left turn
- Customer convenience is not a right.

51

Photo by J. Gattis

ASCE | KNOWLEDGE & LEARNING

Access is a Potential Public Hazard

- All research clearly shows that access to the roadway is always a hazard to some degree.
- On arterials, the hazard can result in injury or death.

52

ASCE | KNOWLEDGE & LEARNING

Legal Issues in Access Management

- Owners must be able to access their property in a reasonable manner.
- They have a right to use, to develop, their property
- Changes in access may impair convenience to existing, but not rise to the level of substantial impairment
- Remaining access needs to be operationally sufficient.

53

ASCE | KNOWLEDGE & LEARNING

***You can manage access without compensation and value loss claims if:**

- Acting for the public good
- Not denying a reasonable level of access
- Not rising to the level of substantial impairment of property use
- Access modification based on standard practices, plans, policy to protect the public

**seek the advice of your agency legal counsel*

54

ASCE | KNOWLEDGE & LEARNING

Legal Issues in Access Management

- Less of a problem if you have a prepared program with clearly defined and reasonable standards.
- Reference to a set of adopted access standards helps the courts determine correct application.

Chapter 468-51 WAC
Highway access management access permits – administrative process

New Jersey Department of Transportation
State Highway Access Management Code

STATE OF COLORADO
State Highway Access Code
Volume 2, Code of Colorado Regulations 601-1

Georgia Department of Transportation
**REGULATIONS FOR
DRIVEWAY
AND
ENCROACHMENT CONTROL**

**FLORIDA STATUTE
335.18
ACCESS MANAGEMENT ACT**

55 **ASCE** KNOWLEDGE & LEARNING

Major US Supreme Court Decision

- Access law varies between States*
- In 1907 the US Supreme court deemed access control was a property rights issue controlled by the sovereign power of the states not the federal government.
 - Sauer v. City of New York

*Consult your attorney

Access Control by Deed

- Controlled-access highway usually refer to freeways and other fully controlled facilities.
- All access rights to and from abutting property are acquired by government either by real-estate transaction or statute.
- Each state has laws defining these special facilities.

57

ASCE | KNOWLEDGE & LEARNING

Access Control by Permit

- If not “fully controlled”, then access rights are managed by agency police powers
- All access should be controlled by permit
- Granting of a permit is a use license
- An encroachment on public R/W
- Owner rights under a license are different than property rights
- Granting of “access right” is a misnomer.

58

ASCE | KNOWLEDGE & LEARNING

Individual property issues within a reconstruction project

59

ASCE | KNOWLEDGE & LEARNING

Do your homework for each Parcel

- Any existing promises, permits?
- Operationally, do they really need what they have?
- Volume and vehicle types and frequency
- Apply the proof of necessity – the least access the land use can work with?
- Convenience does not equate to necessity

60

ASCE | KNOWLEDGE & LEARNING

Meet with the Owner, Lessee

- What is their opinion
- What are traffic and parking issues you may not be aware of
- On-site flow adjustments necessary?
 - Parking circulation, gas pumps, car wash.

61

ASCE | KNOWLEDGE & LEARNING

Site Access Considerations

- Analyze access opportunities on mainline
- Identify all opportunities for access points
- Identify potential shared access opportunities
- Evaluate access impacts to all modes
- Evaluate approach grades

62

ASCE | KNOWLEDGE & LEARNING

Site Access

- Evaluate Transition To Internal Site Circulation
- Access design
- Vehicle stacking
- Curb returns, turning radius
- Delivery requirements (max daily design vehicle)
- Select Safe and Reasonable Access

63

ASCE | KNOWLEDGE & LEARNING

Modifying the Access

64

ASCE | KNOWLEDGE & LEARNING

Getting the Modification Done

- Are there agency procedures?
- Is there a legal permit, or is it “grandfathered”
- There is no property right to the driveway unless there is something in the history
- Temporary Construction Easement?
- All work in right of way?

65

ASCE | KNOWLEDGE & LEARNING

Listen to

- Members of the Public Who Feel Victimized
- Their input is valuable
- Listen very carefully

66

ASCE | KNOWLEDGE & LEARNING

Balance Public Safety and Access Needs

- Be as fair and reasonable as you can
- Know the project impact of being flexible

67

ASCE | KNOWLEDGE
& LEARNING

Decision Paperwork, pit falls

- Do not include access issues in property agreements
- Driveways are licenses, police power.
- Don't make it a property right
- Don't 'permit' left turns
- Be consistent between owners even if some can pull big strings

68

ASCE | KNOWLEDGE
& LEARNING

Rights of Appeal, Due process

- Property owners have a right to either administrative hearing or full court depending on agency process
- If R/W is involved, access change should be folded into R/W acquisition.
- If damage claims, also full court.
- Access issues should be settled in limine hearing (is access compensable?)

69

ASCE | KNOWLEDGE & LEARNING

Access Management Decisions Should be Identified Early in Planning Documents

Helps lower risks of claims
Resolution of issues more likely

70

ASCE | KNOWLEDGE & LEARNING

Access Management Planning

- A plan for a specific segment
- Joint effort to set function and purpose
- Determine performance measures
 - Safety, capacity, efficiency
- Level of allowable private access
- Locations of public intersections
- Final joint agreement for all access permitting.

71

ASCE | KNOWLEDGE & LEARNING

Build Consensus

- Project performance buy-in at project description, regional planning levels
- Link access control to performance
- Link to community safety, regional health and safety
- AM is good for business because mobility, travel efficiency, is good for business.

72

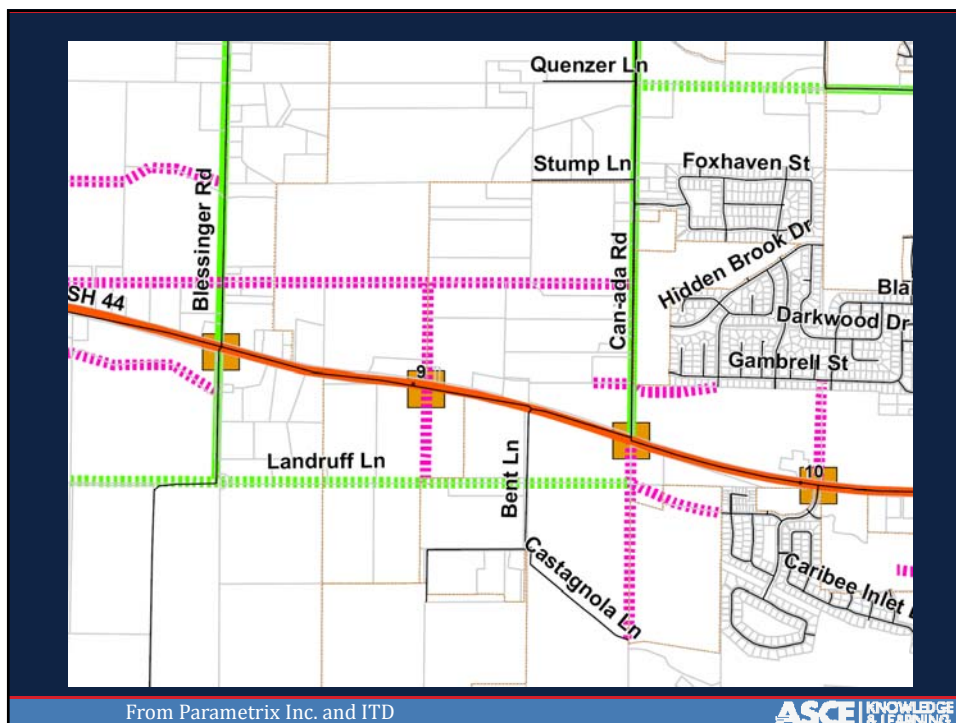

ASCE | KNOWLEDGE & LEARNING

Build Consensus

- Don't do it alone
- Get ahead on determining solutions to all concerns – such as U-Turns due to raised median
- AM is not a new strategy, it is proven.

73

ASCE | KNOWLEDGE & LEARNING

From Parametrix Inc. and ITD

ASCE | KNOWLEDGE & LEARNING

Medians, a very cost effective and useful design element

75

ASCE | KNOWLEDGE & LEARNING

Using Medians to Improve Operation and Safety

- #1 design element in AM
- Does not touch driveways
- Can be controversial
- Not compensable – no right to a left
- Requires consideration of new circulation patterns

76

ASCE | KNOWLEDGE & LEARNING

Left Turns Dominate Crash History

77

ASCE KNOWLEDGE & LEARNING

TWLTL has limits

78

ASCE KNOWLEDGE & LEARNING

Painted Median?

- Generally, >25,000 daily means higher collision rate if TWLTL
- Speed differential can be high in lane
- Not recommend for > 35 mph
- Not recommended for >4 lanes
- Painted medians are cheaper
- Paint does not control left turns
- Painted medians do not allow signs

79

ASCE | KNOWLEDGE & LEARNING

- Painted medians often need 'short' medians (for left turn bays)

80

ASCE | KNOWLEDGE & LEARNING

Overlapping Left-Turn Movements on TWLTL

81

Access Management Toolkit

Subdivision Design/Street Pattern

Reverse Frontage Roads

Description:

When land is subdivided for residential use, lots abutting the thoroughfare should not be allowed to obtain driveway connections on the thoroughfare. Instead, the subdivision should be designed so that lots obtain access from an interior street, also known as a reverse frontage street or backage road. Landscaping, berms, or other barriers may be provided at the rear of these properties to buffer them from the noise, debris, and traffic on the thoroughfare. This also reduces the potential for dangerous conflicts between high-speed traffic and residents and other drivers entering and exiting a driveway.
